Allowable Subject Matter

1. Claims 1, 11, 12, 13, 23 and 24 are allowed because these claims have been amended to include allowable subject matter that was indicated to be allowable in the Office Action mailed 06/26/07. Therefore, none of the reference of record alone or in combination discloses or suggest a recording/reproduction method, comprising the steps of:

generating a binary signal by converting a reproduction signal to a binary form;

generating a synchronization signal using the binary signal, the synchronization signal being in synchronization with a clock signal;

measuring a time interval between the binary signal and the synchronization signal and measuring an edge shift amount between the time interval and a clock time interval specified by the clock signal; and

changing a parameter of a recording pulse based on the edge shift amount,

wherein the reproduction signal is a signal obtained by reproducing an arbitrary random signal sequence, as a function of the edge shift amount,

wherein the step of measuring the edge shift amount comprises measuring a leading edge time interval between a mark leading edge of the binary signal and a mark trailing edge of the synchronization signal, measuring a leading edge shift amount between the leading edge time interval and the clock time interval, measuring a trailing edge time interval between a mark trailing edge of the binary signal and a mark leading edge of the synchronization signal, and measuring a trailing edge shift amount between the trailing edge time interval and the clock time interval, and

wherein the measuring step comprises measuring a jitter value; the recording pulse contains a first pulse, a multipulse, and a cooling pulse; and the step of changing the parameter of the recording pulse comprises changing a movement amount of the first pulse based on the leading edge shift amount, changing a movement amount of the cooling pulse based on the trailing edge shift amount, and changing a movement amount of the multipulse based on the jitter value; or

wherein the measuring step comprises measuring a jitter value; the recording pulse contains a first pulse, a multipulse, and a cooling pulse; and the step of changing the parameter of the recording pulse comprises changing a movement amount of the first pulse based on the leading edge shift amount, changing a movement amount of the multipulse based on the trailing edge shift amount, and changing a movement amount of the cooling pulse based on the jitter value; or

wherein the measuring step comprises measuring a jitter value; the recording pulse contains a first pulse, a multipulse, and a cooling pulse; and the step of changing the parameter of the recording pulse comprises changing a movement amount of the first pulse based on the leading edge shift amount, changing a power of the multipulse based on the trailing edge shift amount, and changing a movement amount of the cooling pulse based on the jitter value.
